

**Design-Glass fabric silver 280 g/m<sup>2</sup>**

**Köperweave, width 80 cm**

**on both sides glossy**

**Calculated data for hand laminates with 35 volume percent fibres:**

Resin consumption: 202 g/m<sup>2</sup>

Laminate thickness: 0.28 mm

Laminate weight: 482 g/m<sup>2</sup>

Design-Glass fabric is a high-gloss aluminium-coloured fabric that can provide surfaces with an exquisite and unusual visual appeal.

Ideal for flat and spheric components like skis, snowboards, car parts (engine cowlings, air filter covers, etc.), and furniture (tabletops), semi-monocoques for safety helmets and bicycle parts (frames) etc.

Design-Glass fabric is a glass-based fabric metallised on both sides. This special finish provides components with surfaces of a highly metallic lustre.

A high-gloss depth of effect is obtained when the fabric is impregnated with epoxy or polyester resins.

Design-Glass fabric is available as a dry fabric from R&G and can be cut to size with great precision. Its metallised surface makes it slip-resistant.

280 g/m<sup>2</sup> üvegszövet alapú, mindkét oldalán alumínium-színű szövet dekor célokra. Köper szövése miatt alkalmas bonyolult geometriai formák tökéletes követésére. Magas fényű felületet ad.

35 térfogat százalékos száltartalom mellett: a gyanta felhasználás 202 g/m<sup>2</sup>, a laminátum vastagság 0,28 mm, a laminátum súlya 482 g/m<sup>2</sup>.

Alkalmas poliészter , vinilészter és epoxi gyantához egyaránt, könnyen vágható.
